S.B. JAIN INSTITUTE OF TECHNOLOGY MANAGEMENT & RESEARCH, NAGPUR

Practical 03

Aim: Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

Name: Siddhanth Navin Sukhdeve

USN: CM24048

Semester / Year: IV Semester / II Year

Academic Session: 2025 – 2026

Date of Performance: 27 / 01 / 2026

Date of Submission: 03 / 02 / 2026

❖ **Aim:** Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

❖ **Tasks to be done in this Practical.**

a) Write a shell script to generate mark- sheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student.

b) Write a menu driven shell script which will print the following menu and execute the given task.
  ➢ Display calendar of current month.
  ➢ Display today's date and time.
  ➢ Display usernames those are currently logged in the system.
  ➢ Display your terminal number

c) Write a shell script which will generate first n Fibonacci numbers like: 1, 1, 2, 3, 5, 13

d) Write a shell script which will accept a number b and display first n prime numbers as output.

e) Write menu driven program for file handling activity
  ➢ Creation of file.
  ➢ Write content in the file.
  ➢ Upend file content.
  ➢ Delete file content

❖ **Objectives:**

  1. Automate marksheet generation with total, percentage, and class classification.
  2. Develop menu-driven scripts for system information and file operations.
  3. Generate Fibonacci and prime numbers for user-defined inputs.

❖ **Requirements:**
  ✓ **Hardware Requirements:**
  • Processor: Minimum 1 GHz
  • RAM: 512 MB or higher
  • Storage: 100 MB free space

  ✓ **Software Requirements:**
  • Operating System: Linux/Unix-based
  • Shell: Bash 4.0 or higher
  • Text Editor: Nano, Vim, or any preferred editor

❖ **Theory:**

Shell scripting is a powerful way to automate repetitive tasks and manage system operations efficiently. It allows users to write programs using shell commands and scripting constructs. Shell scripts are interpreted line-by-line by a shell interpreter, making them ideal for administrative tasks, file management, and system automation. This practical encompasses a variety of real-world scenarios that demonstrate the utility of shell scripting for computing tasks and resource management.

1. Marksheet Generation
This script takes input marks for three subjects, calculates the total marks, percentage, and determines the class of the student based on predefined conditions. Conditional statements (if-else) are used to classify the performance into distinction, first class, second class, or fail. This exercise emphasizes the use of arithmetic operations and decision-making constructs.
Key concepts include:
- Reading user input using read
- Arithmetic operations with $((expression))
- Conditional statements for decision-making

2. Menu-Driven Script for System Information
Menu-driven scripts enhance user interaction by presenting a list of options for performing different tasks. In this practical, options are provided to display the calendar of the current month, the current date and time, logged-in users, and the terminal number. The script utilizes looping constructs (while) and case statements for structured flow control.
Commands used:
- cal for displaying the calendar
- date for showing current date and time
- who to list logged-in users
- tty to identify the terminal

3. Fibonacci Number Generation
Fibonacci numbers are a sequence where each term is the sum of the two preceding ones. The script uses iterative constructs (for loop) to generate n terms based on user input. This practical illustrates the use of loop control and variable swapping to generate series data efficiently.

4. Prime Number Display
This script accepts an integer n and outputs the first n prime numbers. A nested loop checks divisibility to determine if a number is prime. The practical demonstrates logic building for number-theoretic operations using loops and conditionals.

5. Menu-Driven File Management
The file handling script enables users to create, write, append, and delete file content. The case construct manages different file operations.
Commands include:
- touch to create files
- cat for writing and appending content
- rm for deleting files

This exercise emphasizes text manipulation, input handling, and file control mechanisms in Unix-like environments.
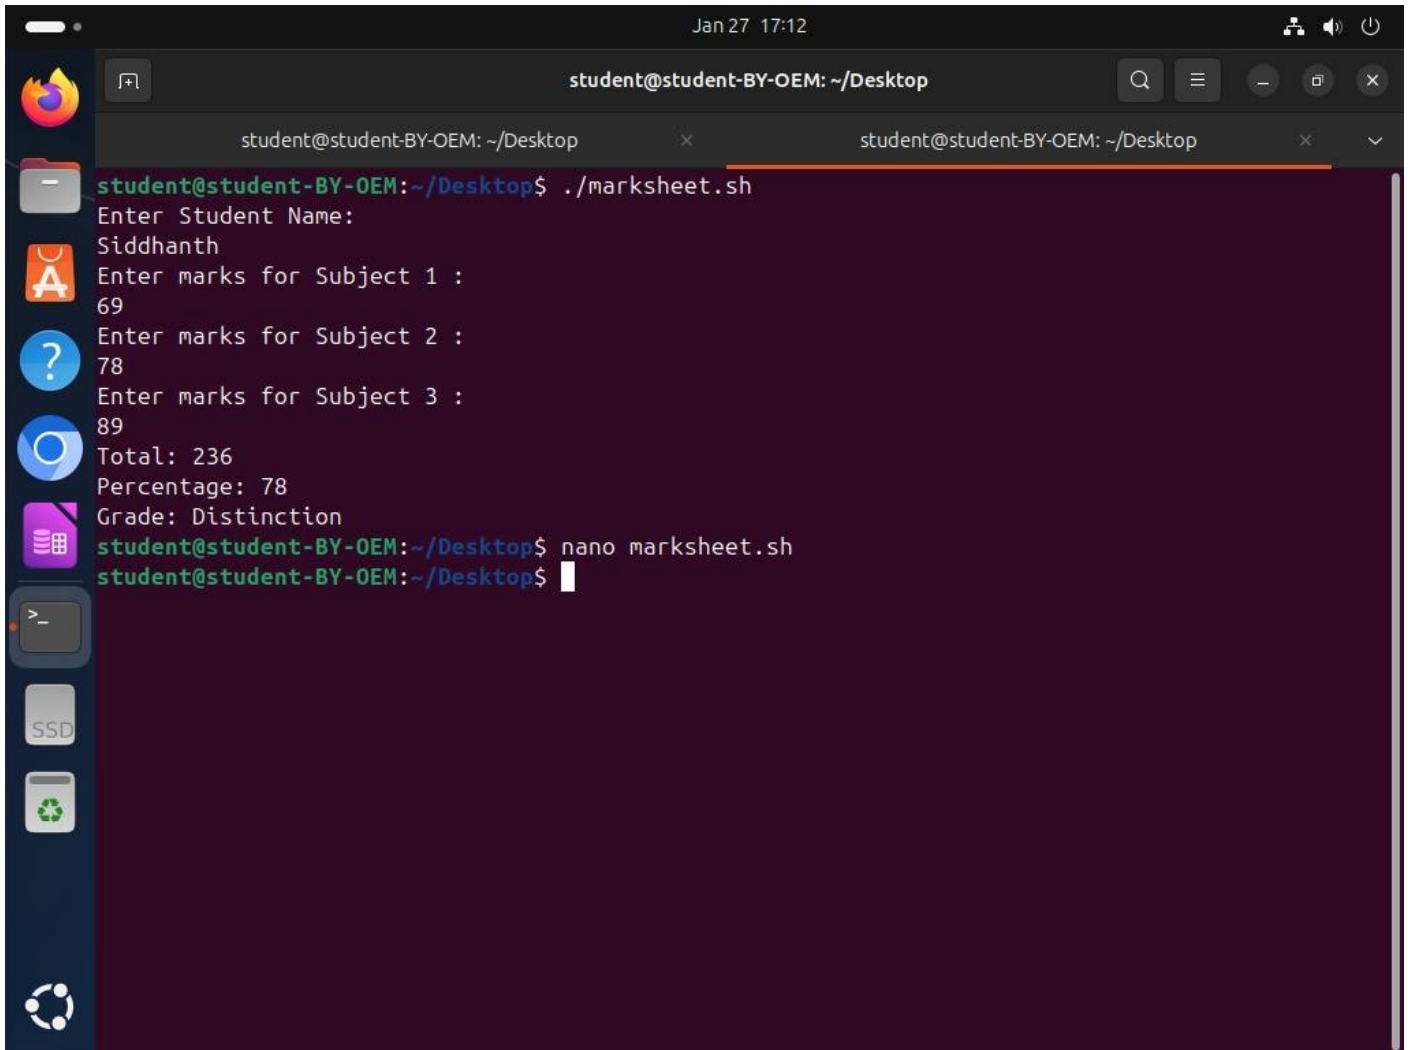

Diagrammatical View of Shell
❖ **CODES**

1. **Write a shell script to generate mark- sheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student.**

Output 1:

```
student@student-BY-OEM:~/Desktop$ ./marksheet.sh
Enter Student Name:
Siddhanth
Enter marks for Subject 1 :
69
Enter marks for Subject 2 :
78
Enter marks for Subject 3 :
89
Total: 236
Percentage: 78
Grade: Distinction
student@student-BY-OEM:~/Desktop$ nano marksheet.sh
student@student-BY-OEM:~/Desktop$
```

2. Write a menu driven shell script which will print the following menu and execute the given task.

➢ **Display calendar of current month.**
➢ **Display today's date and time.**
➢ **Display usernames those are currently logged in the system.**
➢ **Display your terminal number**

Output 2:

```
siddhanth@LAPTOP-8CBTHR1    ✕    +    ⌄

siddhanth@LAPTOP-8CBTHR1M:~$ cd /mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$ ./menu.sh
1. Display calendar of current month
2. Display today's date and time
3. Display currently logged in users
4. Display terminal number
5. Exit
Enter your choice: 1
Calendar of current month:
   February 2026
Su Mo Tu We Th Fr Sa
 1  2  3  4  5  6  7
 8  9 10 11 12 13 14
15 16 17 18 19 20 21
22 23 24 25 26 27 28

1. Display calendar of current month
2. Display today's date and time
3. Display currently logged in users
4. Display terminal number
5. Exit
Enter your choice: 2
Today's date and time:
Sun Feb  1 08:18:25 UTC 2026

1. Display calendar of current month
2. Display today's date and time
3. Display currently logged in users
4. Display terminal number
5. Exit
Enter your choice: 3
Currently logged in users:
siddhanth pts/1        2026-02-01 08:18

1. Display calendar of current month
2. Display today's date and time
3. Display currently logged in users
4. Display terminal number
5. Exit
Enter your choice: 4
Your terminal number:
/dev/pts/0

1. Display calendar of current month
2. Display today's date and time
3. Display currently logged in users
4. Display terminal number
5. Exit
Enter your choice: 5
Exiting program...
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$
```

3. Write a shell script which will generate first n Fibonacci numbers like: 1, 1, 2, 3, 5, 13

Output 3:

```
siddhanth@LAPTOP-8CBTHR1    ×    +    ∨

siddhanth@LAPTOP-8CBTHR1M:~$ cd /mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$ ./fib.sh
Enter value of n: 8
Fibonacci Series:
1 1 2 3 5 8 13 21
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$
```

4. Write a shell script which will accept a number b and display first n prime numbers as output.

Output 4:

```
siddhanth@LAPTOP-8CBTHR1    ×    +    ∨

siddhanth@LAPTOP-8CBTHR1M:~$ cd /mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$ ./prime.sh
Enter value of desired prime numbers: 9
2 3 5 7 11 13 17 19 23
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$
```

5. **Write menu driven program for file handling activity**
   - ➢ **Creation of file.**
   - ➢ **Write content in the file.**
   - ➢ **Upend file content.**
   - ➢ **Delete file content**

Output 5:

```
siddhanth@LAPTOP-8CBTHR1M:~$ cd /mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$ ./file_handling.sh
Enter file name:
Sidd
1. Create File
2. Write Content to File
3. Append File Content
4. Delete File Content
5. Exit
Enter your choice: 1
File created
1. Create File
2. Write Content to File
3. Append File Content
4. Delete File Content
5. Exit
Enter your choice: 2
Enter content (Ctrl+D to save):
Hello I am Siddhanth
1. Create File
2. Write Content to File
3. Append File Content
4. Delete File Content
5. Exit
Enter your choice: 4
File content deleted
1. Create File
2. Write Content to File
3. Append File Content
4. Delete File Content
5. Exit
Enter your choice: 5
siddhanth@LAPTOP-8CBTHR1M:/mnt/c/Users/Siddhanth/OneDrive/Desktop/OS_Lab/Practical3$
```

❖ **Conclusion**: In this practical, we conclude that shell scripting efficiently automates tasks like marksheet generation, system information display, number computations, and file management, enhancing system operations and user interaction through command-line utilities.

❖ **Discussion Questions:**

1. **What is the purpose of using shell scripting in this practical?**
2. **Which command is used to display the current date and time?**
3. **How does the script calculate the Fibonacci sequence?**
4. **Which command is used to create a file in the file management script?**
5. **How does the prime number script determine if a number is prime?**
